

# Supporting Shell's FLNG Prelude

## Case Study

**Shell is to build the world's first floating liquefied natural gas facility (FLNG) and Fendercare has been awarded a contract to supply much needed mooring and monitoring equipment for this important new vessel.**

The vessel holds the potential to unlock vital energy resources offshore, without the need to lay pipelines and build processing plants on land.

**"The award of this contract demonstrates our ability to provide solutions to projects at the forefront of the FLNG industry."**

*Phil Shaw, Marine Sales Manager, Fendercare*

**Who**  
Shell

#### Summary

Shell to build the world's first floating liquefied natural gas facility (FLNG), holding the potential to unlock vital energy resources offshore

#### Services provided

- Project support to Shell's ambitious and highly innovative development
- Supply of fenders, fender davits, quick release hooks and mooring monitoring systems required by the FLNG prelude

#### Benefits delivered

- Reduced operational risk
- Service-led approach
- Crucial support to highly significant offshore project
