

R2S Self-Capture

Return To Scene Limited has a distinguished reputation for delivering world-leading visualisation solutions. The continued evolution of our business ensures our clients have access to the best products and services available.

Responding to the challenges presented by limited bed-space and diverse geographic worksites and recognising the opportunities created by developments in photographic capture methods, Return To Scene has launched R2S Self-Capture.

R2S Self-Capture enables our clients' local teams to collect survey data with a specially developed survey capture kit. Imagery is then uploaded via our secure online portal, processed and made accessible – all with minimal training.

Created to balance ease-of-use and image quality, R2S Self-Capture retains the award-winning functionality of R2S Mosaic; an industry leading asset information management software.

Enabling the on-site workforce

Maximising the value of local workforce

Up-skilling local teams and your existing supply chains to execute additional work scopes.

Ease of update

Maintain a fully up-to-date visual model efficiently, effectively and safely.

Tangible cost savings

Eliminate additional mobilisation costs and realise immediate return on investment.

Full R2S Mosaic functionality

R2S Self-Capture projects retain; measurement, tag auto-placement, 3D model overlay, photogrammetry point cloud, and 3rd party data and software integration capabilities.
