

# Digi Rig – Plan onshore. Execute offshore. With Confidence

## The Challenge

Offshore well test planning is often built on incomplete or outdated information, fragmented drawings, siloed contractors, and multiple offshore visits just to validate reality. The result? Rising costs, avoidable delays, HSE exposure, and teams arriving offshore with uncertainty.

## The Insight

**Better decisions happen before you mobilise.** When teams can see the real rig conditions early, uncertainty disappears, and planning becomes faster, safer, and more accurate.

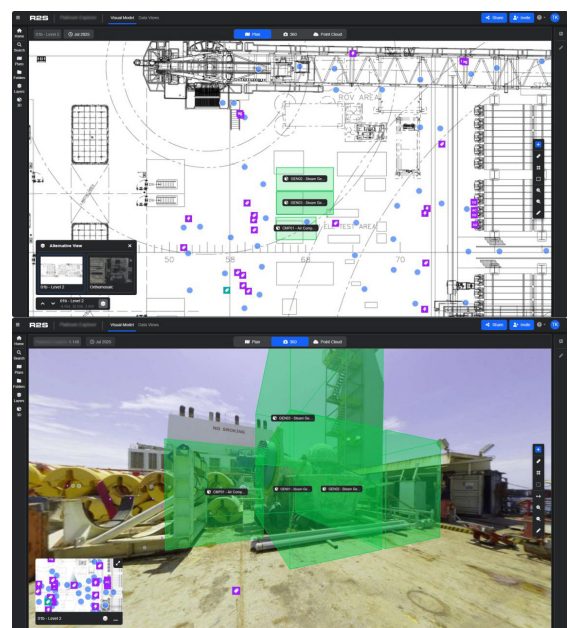

## The solution: Digi Rig

Digi Rig gives well testing teams' total clarity **before they step offshore**. Using a one-time high-resolution digital survey and R2S technology, we capture the areas that matter and generate an ultra-precise, fully interactive 3D digital twin of your rig.

Everything is delivered through **R2S - your secure, central hub for rig intelligence**.

## What Digi Rig enables

- Arrive offshore already familiar with the rig layout
- Design bespoke well test systems using trusted, up-to-date data
- Plan pipework and equipment routing with confidence
- Check clearances, layouts, and interfaces in minutes
- Mark up equipment tie-ins ahead of time
- Identify HSE risks early - long before mobilisation
- Reduce POB and eliminate repeat visits offshore
- Streamline future planning with easy access to historical well test data

# Digi Rig – Plan onshore. Execute offshore. With Confidence

## What we capture

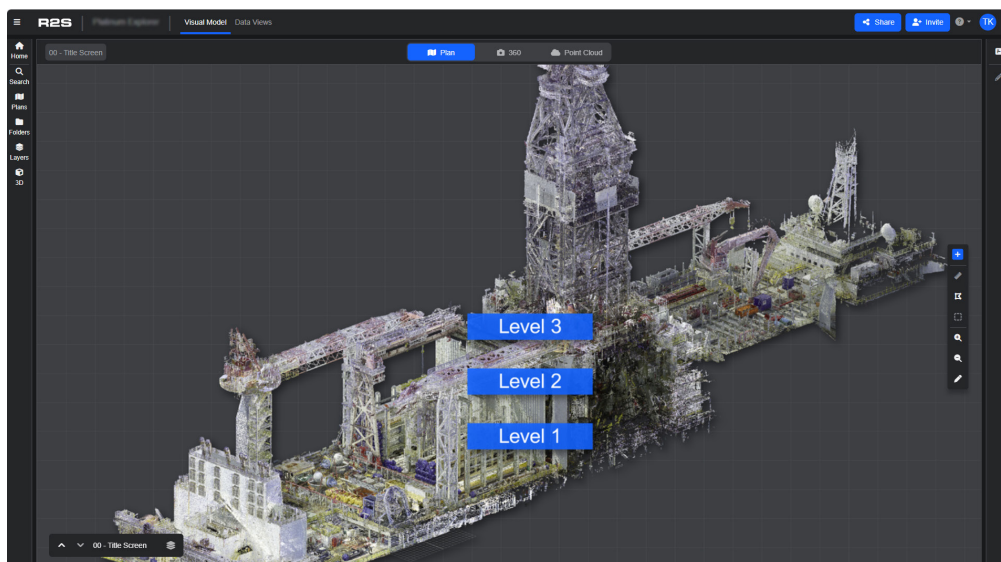

- Full 3D imaging of the areas of interest
- Accurate equipment layouts and tie-ins
- P&IDs layered directly into the model
- Rig integration points and auxiliary interfaces

## The Impact

- Faster, more accurate design
- Optimised equipment placement
- Early HSE validation
- Reduced mobilisation and survey costs
- Improved operational readiness and team confidence

## Proof from the field

On an ultra-deepwater drillship, a single Digi Rig survey enabled early validation of pipework routing, rig interfaces, and HSE considerations, reducing rework and avoiding repeat offshore visits.

## One visit. Real clarity

Transform your offshore well-test planning with Digi Rig.
